

VITAMIN B HEALTHY®

MIXING DIRECTIONS

Below is a quick reference guide for mixing Vitamin B Healthy®. You may want to modify the dosage based on your own knowledge or your hive's needs.

Feeding Syrup Preparation – Honey-B-Healthy, Inc. recommends preparing your feeding syrup using the following steps. Once your syrup is prepared, allow it to cool to room temperature prior to adding Honey B Healthy® feeding stimulants.

Syrup Preparation Steps:

1. For spring/summer, mix syrup at a ratio of 1-part sugar to 1-part water.
2. For fall, mix syrup at a ratio of 2 parts sugar to 1-part water.
3. Bring syrup mixture to a boil if desired, or just use warm water to dissolve sugar. Boiling is not necessary when using Honey B Healthy® products.
4. Allow syrup to cool.
5. Add Vitamin B Healthy® stimulant per recommendations below.

Feeding Stimulant - Can be used alone in syrups, protein patties and along with Honey B Healthy®, Amino-B Booster® and HBH™ Super Plus. Helps provide needed nutrients vital for bee health and helps build strong healthy colonies for maximum honey products and pollination. Can also be used to help build up weak, over-winterized colonies, packages, nucs and swarms. Feeding during fall can cause winter brood rearing.

Important - Shake well. Use clean feeders. Best fed inside colony or on top of colony in an opaque or covered container to protect from sun light. If used in protein patties, add ½ tsp. (2.5 ml) per 3 lbs. of mix. Exceeding recommended dosage will slow consumption.

MIXING RATIOS

US Standard - Recommended feeding dose - ½ tsp. per quart.

FEEDING STIMULANT	
VITAMIN B HEALTHY®	Syrup
½ tsp.	1 Quart
2 tsp.	1 Gallon

Metric - Recommended feeding dose - 2.5 ml per liter.

FEEDING STIMULANT	
VITAMIN B HEALTHY®	Syrup
2.5 ml	1 Liter
10 ml	4 Liters
